Ryan Guthrie

Senior Software Engineer | Software Architect

Eugene, Oregon (Remote) | ryan@ryanguthrie.com | +1 541 357 7487
ryanguthrie.com | linkedin.com/in/ryanguthrie

PROFESSIONAL SUMMARY

Senior software engineer and software architect with 20+ years of experience designing reliable systems and delivering products from initial discovery through production. Combines hands-on full-stack engineering with backend architecture, cloud infrastructure, Linux operations, data systems, developer tooling, and cross-functional technical leadership.

CORE EXPERTISE

Software and solution architecture | Distributed backend systems | TypeScript, JavaScript, Node.js, Go, Python | AWS and Cloudflare | PostgreSQL and MongoDB | Linux operations and security | CI/CD and developer tooling | Cross-functional technical leadership

PROFESSIONAL EXPERIENCE

Senior Software Engineer / Architect | Independent Product Development

January 2024 - Present | Eugene, OR (Remote)

- Designed, built, and operate Anna (anna.gup.io), an autonomous AI assistant platform: Go/TypeScript services on Cloudflare Workers with an MCP-based tool gateway, persistent memory, and human-approval controls for autonomous actions.
- Built IncidentPulse, a real-time incident-command platform (Serverpod/Dart backend, Flutter web client): incident state machine, signed webhook ingestion with PII redaction, and WebSocket war-room streaming; entered in the Serverpod "Build Something Real" hackathon.
- Built Tributary, a claims-and-attestations layer for git workflows on Cloudflare Workers and Artifacts; entered in Cloudflare's "Build the Next GitHub" challenge.
- Built PRISM, a zero-trust gateway for AI-agent tool calls (JWT authentication, policy enforcement, audit logging), and They Might Byte, a developer-apparel print-on-demand storefront.

Senior Software Engineer | Earnest

June 2021 - January 2024 (2 years 8 months) | United States (Remote)

- Collaborated with the Growth team and diverse stakeholders, leading multiple engineering initiatives to optimize customer experience and top-of-the-funnel conversion across organizational boundaries.
- Architected projects from initial first-principles planning through reliable production release across cloud stacks, including AWS Lambdas, AWS Gateways, user referral tracking systems, and Next.js static/incremental generation (SSG/ISR).
- Partnered directly with product, marketing, lifecycle, and analytics leaders to define requirements and drive engineering execution while mentoring developers and improving CI/CD workflows.

Senior Software Engineer | Wizeline

December 2019 - June 2021 (1 year 7 months) | Guadalajara Area, Mexico & Remote

- Served as core platform backend contractor for a major U.S. financial services institution, guiding backend system design and scalability.
- Engineered high-throughput, secure backend microservices using Node.js, AWS, Docker, Jenkins, PostgreSQL, and GraphQL.

Consultant / Programmer | ryanguthrie.com

March 2008 - April 2021 (13 years 2 months) | Eugene, OR & Remote

- Provided freelance software architecture, custom system development, and Linux security consulting across a 13-year span.
- Executed Linux server provisioning, kernel hardening, automation scripting, and comprehensive vulnerability auditing.
- Architected AWS scaling-on-demand backend APIs, executed complex database migrations (PostgreSQL, MySQL, MongoDB), and engineered custom web/mobile applications and interactive HTML5 Canvas/Unity tools.

PROFESSIONAL EXPERIENCE, CONTINUED

Senior Software Architect | Paybook

January 2013 - December 2019 (7 years) | Mexico / LatAm / US

- Joined the startup's small team and became the first engineer working on the financial data aggregation backbone that later became Paybook Sync; the platform was operational before the engineering team expanded.
- Designed and implemented the architecture, scaling model, pipelines, cloud infrastructure, database schemas, DevOps tooling, and user-facing components.
- Built and operated integrations across financial institutions in Mexico, Colombia, Brazil, the United States, and Europe, with tooling that helped a very small team respond quickly while minimizing user impact.

Programmer | New World Brands, INC

April 2008 - March 2009 (1 year) | Eugene, OR

- Developed internal enterprise applications utilizing Perl and AJAX user interfaces to automate and monitor international VoIP networks.
- Saved significant operational costs by creating an automated smart-recharging and dynamic routing engine for international voice traffic.

Linux System Admin | TouchSupport

October 2005 - March 2008 (2 years 6 months) | United States

- Provided top-level Linux system administration, kernel hardening, and security auditing across web hosting server clusters.
- Responded to critical security vulnerabilities and diagnosed complex system performance bottlenecks.

SELECTED INDEPENDENT WORK

- **Liaison:** Designed and built a working-alpha product discovery workspace that separates confirmed facts from proposals and keeps AI output behind explicit human review and approval gates.
- **Ryan-OS:** Created a reusable platform for project foundations, testing, automation, and cloud delivery across independent products.

ADDITIONAL DETAILS

Working range: Astro, Next.js, React, Express, Docker, GraphQL, Supabase, HTML5 Canvas, WebGL, Bash, PowerShell, PHP, and Perl.

Languages: English (Native / Bilingual) | Spanish (Professional Working)
